DETAILED ACTION

Claims 1-17 are pending in this application. Claims 1,9 and 16-17 are independent claims.

The present title of the invention is "Multiple Scan Line Sample Filtering".

Allowable Subject Matter

1. Claims 1-17 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Prior art references do not anticipate or suggest the limitation "rendering a plurality of samples from vertex data, wherein each sample is rendered for a specific point in screen space...storing a first portion of samples in a cache memory...filtering a first subset of the first portion of samples to generate a first pixel in a first scan line; and filtering a second subset of the first portion of samples to generate a second pixel in a second scan line, wherein the second scan line neighbors the first scan line" in combination with the other claim limitations in claims 1, 9 and 16.

Prior art references do not anticipate or suggest the limitation "a first means for storing a plurality of samples, wherein each sample is rendered for a specific point in screen space...wherein the first portion of samples corresponds to pixels in at least two neighboring scan lines; a second means for storing the first portion of samples; and means for filtering respective subsets of the first portion of samples to generate a plurality of respective pixels, wherein the plurality of respective pixels are in a plurality of scan lines" in combination with the other claim limitations in claim 17.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
